AGILE / SCRUM PROJECT DOCUMENTATION

EXPRESSION OF NEED

Human Resources Management System (HRMS)

Document issued by the Product Owner

Project	Human Resources Management System (HRMS)
Document type	Expression of Need – Business requirements
Document reference	HRMS-EDB-001
Version	1.0
Issued by	The Product Owner – HRMS Project
Intended for	Scrum Master, Development Team, Stakeholders, Academic supervisor
Date of issue	09 / 09 / 2026
Status	Submitted for validation
Classification	Internal – Academic project

1. INTRODUCTION

1.1 Context

Human resources are the first asset of any organisation and, at the same time, its first cost. In most small and medium organisations of our environment, human resources are still managed with paper files, isolated spreadsheets and manual calculations. Employee records are scattered, leave balances are computed by hand, attendance is recorded on paper registers, payroll is produced in a spreadsheet that only one person masters, and the accounting entries related to salaries are re-keyed a second time in the accounting system.

This situation produces well known consequences: loss of information, errors in salary and contribution calculations, late payment of statutory declarations, impossibility to answer simple management questions (headcount by department, absenteeism rate, payroll evolution), and a heavy dependency on a few individuals. It also makes any audit difficult, since the history of decisions such as promotions, transfers or salary changes is not traceable.

The present project therefore aims at building an integrated Human Resources Management System (HRMS) covering the complete life cycle of the employee, from recruitment to departure, including attendance, leave, work planning, career evolution, payroll production, printing of legal documents and the generation of the corresponding accounting entries in compliance with the OHADA accounting system.

1.2 Purpose of this Document

As Product Owner, I express in this document the complete set of needs that the future system must satisfy. This document is the single business reference of the project. It does not describe technical solutions, screens or database structures: it describes what the business expects and why. It is the input from which the Scrum Team builds the Product Backlog, using the Product Backlog Template of the project.

Every need carries a unique reference (BN-xx) and a priority level. These references must be reported in the traceability matrix of the backlog so that, at any moment, it is possible to verify that each need is covered by at least one user story and that no development is carried out without a corresponding need.

1.3 Audience

- The Scrum Master and the Development Team, who transform these needs into user stories, estimates and increments.
- The HR, payroll and accounting stakeholders, who verify that their business reality is correctly described.
- The general management, which validates the business objectives and the priorities.

- The academic supervisor, who evaluates the completeness and the quality of the requirement analysis.

1.4 Reference Documents

Ref.	Document	Use
RD-01	Cameroon Labour Code and its implementing texts	Legal framework of contracts, working time, leave and termination
RD-02	National social insurance regulations (CNPS)	Social contributions, declarations and employee registration
RD-03	General Tax Code – taxation of salaries	Income tax and salary-related levies withheld at source
RD-04	OHADA Uniform Act on accounting and financial reporting (SYSCOHADA)	Chart of accounts, journals, books and financial statements
RD-05	Collective agreement and internal rules of the organisation	Company-specific bonuses, seniority and disciplinary rules
RD-06	HRMS Product Backlog Template (HRMS-PBL-TPL-001)	Structure receiving these needs

Table 3 – Reference documents

1.5 Definitions and Abbreviations

Term	Definition
HRMS	Human Resources Management System – the product to be built.
OHADA	Organisation for the Harmonisation of Business Law in Africa, whose accounting system (SYSCOHADA) applies to the organisation.
SYSCOHADA	Accounting system of OHADA: chart of accounts, journals, books and financial statements.
CNPS	National social insurance fund to which social contributions are declared and paid.
DIPE	Statutory declaration of employed personnel filed with the social insurance body.
Payslip	Legal document delivered to the employee describing the calculation of the net salary of a period.
Gross salary	Total of the base salary and all taxable and contributory elements before deductions.
Net payable	Amount actually paid to the employee after all deductions and reimbursements.
Payroll period	Monthly cycle for which the payroll is calculated, validated, paid and posted.
Affectation transfer /	Administrative act placing an employee in a department, a position or a workplace.
Promotion	Administrative act changing the grade, the category or the position of an employee.
ESS / MSS	Employee Self-Service / Manager Self-Service.

Term	Definition
Product Owner	Author of this document, responsible for the value delivered by the product.

Table 4 – Definitions and abbreviations

2. CURRENT SITUATION AND PROBLEMS TO SOLVE

The following difficulties are observed today and justify the project. They constitute the problems against which the success of the product will be measured.

Ref.	Observed problem	Consequence for the organisation
PB-01	Employee files kept on paper and in scattered spreadsheets.	Information lost or duplicated, slow retrieval, no reliable headcount.
PB-02	Leave balances calculated manually.	Disputes with employees, over-consumption of leave, unreliable provisions.
PB-03	Attendance recorded on a paper register.	Impossible control of lateness, absence and overtime; payroll based on estimates.
PB-04	Payroll produced in an unprotected spreadsheet.	Calculation errors, risk of fraud, total dependency on one person.
PB-05	Payroll documents typed one by one.	Delays in delivering payslips and certificates; poor image towards staff.
PB-06	Salary accounting entries re-keyed in the accounting system.	Double work, discrepancies between payroll and accounts, difficult audit.
PB-07	Career decisions (promotion, transfer) not historised.	No traceability, unfair decisions, loss of institutional memory.
PB-08	No consolidated HR indicators.	Management decisions taken without reliable data.
PB-09	Statutory declarations prepared manually.	Risk of late filing and of financial penalties.

Table 5 – Problems to be solved by the HRMS

3. BUSINESS OBJECTIVES AND EXPECTED BENEFITS

The system must contribute to the following objectives, which are the justification of the investment and the reference for the acceptance of the product.

Ref.	Objective	Measurable expected benefit
OB-01	Centralise all HR information in one reliable source.	One single employee record, accessible in less than one minute.
OB-02	Automate the calculation of payroll and of social and tax deductions.	Payroll of the month produced and validated in less than one working day.

Ref.	Objective	Measurable expected benefit
OB-03	Automate leave, absence and attendance management.	Leave balances permanently exact and available to every employee.
OB-04	Produce all HR and payroll documents in a printable format.	Payslips and certificates issued on demand, without re-typing.
OB-05	Generate the payroll accounting entries in the OHADA format.	Zero re-keying between payroll and accounting; entries balanced by construction.
OB-06	Trace every administrative decision concerning an employee.	Complete and auditable career history for each employee.
OB-07	Provide management with reliable HR indicators.	Dashboards available at any time without manual consolidation.
OB-08	Secure access to personal and salary data.	Access strictly limited to authorised profiles and fully logged.
OB-09	Reduce the administrative workload of the HR department.	Significant reduction of repetitive manual tasks.

Table 6 – Business objectives and expected benefits

4. SCOPE OF THE NEED

4.1 Included in the Scope

The need covers the complete human resources chain of the organisation, from the definition of the organisational structure to the accounting posting of the payroll, for all categories of staff: permanent employees, employees on fixed-term contracts, trainees, temporary workers and consultants under contract.

Domain	Content included
Organisation	Company structure, sites, departments, services, positions, grades, categories, organisation chart.
Employees	Personal data, family, documents, contracts, bank details, dependants, emergency contacts.
Career	Recruitment, integration, promotion, transfer, change of position, sanction, suspension, departure.
Time	Attendance, lateness, overtime, work schedules, shifts, timetables, public holidays.
Absence	All types of leave and absence, requests, approval workflow, balances, planning.
Payroll	Salary elements, calculation, social and tax deductions, payment, history, statutory declarations.
Documents	Payslips, certificates, attestations, contracts, decisions, payroll book, declarations.

Domain	Content included
Accounting	Payroll accounting entries, journals, chart of accounts and reports according to the OHADA system.
Steering	Reports, dashboards, HR indicators, exports.
Administration	Users, profiles, permissions, parameters, audit trail, backup.

Table 7 – Domains included in the scope

4.2 Excluded from the Scope

- The complete general accounting of the organisation: the HRMS produces and exports payroll entries and keeps the payroll-related accounts, but it does not replace the general accounting software for purchases, sales and treasury.
- The actual execution of bank transfers: the system produces the payment order file, the bank executes it.
- Medical management and occupational medicine files, which remain the responsibility of the medical service.
- Payroll rules of countries other than the country of establishment of the organisation.

5. USERS AND EXPECTED ROLES

The system must be usable by the following categories of users. Each user must see only the data and the functions corresponding to his or her role.

User	Expectation towards the system	Sensitivity of the data handled
HR Manager	Steer the whole HR activity, validate decisions, obtain indicators.	Full access to HR data
HR Officer	Manage records, contracts, leave, attendance and documents on a daily basis.	Full access except salary of executives
Payroll Officer	Prepare, calculate, verify, validate and print the payroll.	Full access to salary data
Accountant	Retrieve the payroll accounting entries and control the payroll accounts.	Access to consolidated amounts
Head of Department	Approve leave, follow the attendance of the team, propose promotions.	Access limited to the team
Employee	Consult his or her record, request leave, download payslips.	Access limited to his or her own data
General Management	Consult dashboards and validate strategic decisions.	Read access to consolidated data
System Administrator	Manage users, profiles, parameters and technical operation.	No access to salary amounts

Table 8 – Users of the system and their expectations

I insist as Product Owner on one principle: the visibility of salary information must be strictly controlled. A head of department must be able to follow the attendance and the leave of the team without ever seeing the salaries of its members.

6. OVERVIEW OF THE EXPECTED FUNCTIONAL COVERAGE

The need is organised in eighteen functional modules. This organisation is a reading grid for the requirements; the Scrum Team remains free to group them differently in epics and sprints, provided that the traceability is maintained.

Module	Title	Purpose
M-01	Organisation and structure	Describe the company, its sites, departments, positions and grades.
M-02	Employee records	Hold the complete and reliable file of every employee.
M-03	Recruitment and onboarding	Manage vacancies, applications, selection and integration.
M-04	Contract management	Manage contracts, amendments, trial periods and terminations.
M-05	Attendance and time tracking	Record presence, lateness, absence and overtime.
M-06	Leave and absence	Manage requests, approvals, balances and leave planning.
M-07	Timetable and work planning	Build and publish work schedules and shifts.
M-08	Career management	Manage promotion, transfer, mobility, discipline and departure.
M-09	Training and skills	Manage the skills inventory, training plan and sessions.
M-10	Performance evaluation	Manage objectives, evaluation campaigns and reviews.
M-11	Payroll	Calculate salaries, contributions, taxes and net payable.
M-12	Payroll and HR documents	Produce and print all legal and administrative documents.
M-13	Accounting according to OHADA	Generate, post and export the payroll accounting entries.
M-14	Self-service portal	Give employees and managers autonomous access.
M-15	Reporting and dashboards	Produce HR indicators and management reports.
M-16	Notifications and workflow	Route requests and alert the right people at the right time.
M-17	Security, roles and audit	Control access and trace every sensitive operation.
M-18	Parameters, import, export and integration	Configure the system and exchange data with other tools.

Table 9 – Map of the expected functional modules

The tables of section 7 detail the needs of each module. The priority column uses the MoSCoW convention: M (Must have), S (Should have), C (Could have). Needs marked M constitute the minimum viable product; without them the system cannot be put into service.

7. DETAILED EXPRESSION OF THE NEEDS

7.1 M-01 – Organisation and Structure

The system must first know the organisation in which the employees work, because almost every other function depends on it: an employee belongs to a department, occupies a position, holds a grade, and works on a site. Any change in this structure must be historised, since a payslip or a decision issued last year must remain readable with the structure that was valid at that date.

Ref.	Expressed need	Priority
BN-01	Register the identity of the organisation: corporate name, legal form, registration numbers, tax identification, social insurance employer number, address, logo and legal representative, this information being reused on every printed document.	M
BN-02	Manage a hierarchy of organisational units on several levels: company, site or establishment, division, department, service and team.	M
BN-03	Manage the catalogue of positions with their title, mission, required skills, salary category and reporting position.	M
BN-04	Manage the grid of professional categories, grades, echelons and coefficients used for classification and for the base salary.	M
BN-05	Attach every organisational unit to a manager and to a cost centre used later by the accounting entries.	M
BN-06	Historise every modification of the structure with an effective date, and allow the consultation of the structure as it was at any past date.	S
BN-07	Display and print the organisation chart of the whole company or of a selected unit.	S
BN-08	Manage several sites with different working calendars and different public holidays.	S

Table 10 – Needs of module M-01

7.2 M-02 – Employee Records Management

The employee record is the heart of the system. It must be complete enough to feed payroll, statutory declarations and printed documents without any additional source of information, and it must be protected because it contains personal data.

Ref.	Expressed need	Priority
BN-09	Create, consult, modify, deactivate and archive an employee record; a record is never physically deleted once it has been used in a payroll period.	M

Ref.	Expressed need	Priority
BN-10	Allocate automatically a unique and non-reusable matriculation number to every employee, according to a configurable format.	M
BN-11	Record the civil identity: surname, given names, date and place of birth, sex, nationality, marital status, identity document with its number and validity, and photograph.	M
BN-12	Record the contact details: address, telephone numbers, personal and professional e-mail, and emergency contact.	M
BN-13	Record the family situation and the dependent children with their date of birth, since these elements influence family allowances and tax deductions.	M
BN-14	Record the social insurance registration number, the tax identification number and the professional identification elements required by the declarations.	M
BN-15	Record the bank details of the employee (bank, branch, account number, key, method of payment) with the possibility of paying by transfer, cheque or cash.	M
BN-16	Record the administrative situation: department, position, grade, category, echelon, type of contract, date of hire, seniority and workplace.	M
BN-17	Attach scanned documents to the record (identity document, diplomas, contract, medical certificate, disciplinary letters) with their type and validity date.	S
BN-18	Record the education, diplomas, professional experience and languages of the employee.	S
BN-19	Search and filter employees on any criterion (name, matriculation, department, position, contract type, status) and export the result.	M
BN-20	Alert the HR officer when a document of the record expires (identity document, residence or work permit, medical visit).	C
BN-21	Keep the complete history of every modification of the record with the author, the date and the previous value.	M

Table 11 – Needs of module M-02

7.3 M-03 – Recruitment and Onboarding

Recruitment is the entry point of the employee life cycle. The system must avoid re-typing, at the moment of hiring, the information already collected during the selection process.

Ref.	Expressed need	Priority
BN-22	Express and validate a recruitment need attached to a vacant position of the organisation chart.	S
BN-23	Publish a job offer, receive applications and store the associated documents.	S
BN-24	Follow each application through the stages of the process: received, pre-selected, interview, test, selected, rejected.	S
BN-25	Convert a selected application into an employee record without re-typing the data already captured.	S

Ref.	Expressed need	Priority
BN-26	Manage an onboarding checklist for each new employee (contract signed, registration with the social insurance body, workstation, badge, accounts, equipment) with a person responsible for each item.	C
BN-27	Keep the applications of unsuccessful candidates in a pool for future needs.	C

Table 12 – Needs of module M-03

7.4 M-04 – Contract Management

The contract determines the rights of the employee and a large part of the payroll calculation. It must therefore be managed as a first-class object, with its own history.

Ref.	Expressed need	Priority
BN-28	Manage the various types of contract used by the organisation: permanent contract, fixed-term contract, internship agreement, temporary work, apprenticeship and service contract.	M
BN-29	Record for each contract the start date, the end date where applicable, the trial period, the notice period, the weekly working time, the workplace, the position and the agreed remuneration.	M
BN-30	Manage contract amendments (change of salary, position, working time, workplace) while keeping the successive versions and their effective dates.	M
BN-31	Alert the HR department before the end of a fixed-term contract or of a trial period, with a configurable notice.	M
BN-32	Manage the renewal of a fixed-term contract and control the number of renewals allowed.	S
BN-33	Manage the suspension of the contract (unpaid leave, secondment, sick leave, detention) and its effect on payroll and seniority.	S
BN-34	Manage the termination of the contract by recording the reason, the date, the notice, the balance of leave and the final settlement of accounts.	M
BN-35	Generate the printable contract or amendment document from a configurable template fed by the data of the record.	S

Table 13 – Needs of module M-04

7.5 M-05 – Attendance and Time Tracking

Working time is the direct input of overtime, of absence deductions and of a part of the bonuses. It must be recorded reliably and be reconcilable with the payroll of the period.

Ref.	Expressed need	Priority
BN-36	Record the entries and exits of each employee for each working day, with the possibility of several entries and exits in the same day.	M

Ref.	Expressed need	Priority
BN-37	Allow several recording methods: manual entry by the HR officer, self-recording by the employee, import of a file produced by a badge or biometric device.	M
BN-38	Compute automatically for each day the hours worked, the lateness, the early departure, the missing hours and the overtime, by comparison with the schedule of the employee.	M
BN-39	Distinguish the categories of overtime and of unusual working time (day, night, weekly rest day, public holiday), since they are not remunerated at the same rate.	M
BN-40	Require the approval of the line manager before overtime is transferred to the payroll.	M
BN-41	Identify and qualify unjustified absences and transform them into a deduction on the payroll of the period.	M
BN-42	Provide a daily, weekly and monthly attendance sheet per employee, per team and per department, printable and exportable.	M
BN-43	Manage missions and field work, so that an employee who is not on site is not counted as absent.	S
BN-44	Manage the regularisation of a forgotten or erroneous clocking, with justification and approval, the original record remaining visible.	S
BN-45	Consolidate the attendance data of the period and lock it once the payroll of the period is validated.	M

Table 14 – Needs of module M-05

7.6 M-06 – Leave and Absence Management

Leave management is today the first source of dispute between the employees and the HR department. The system must make the balance of every employee permanently exact, visible and justified.

Ref.	Expressed need	Priority
BN-46	Manage a configurable catalogue of leave and absence types: annual leave, sick leave, maternity leave, paternity leave, exceptional leave for family events, unpaid leave, compensatory rest, technical unemployment and any type added later.	M
BN-47	Define for each type whether it is paid or unpaid, whether it consumes the annual entitlement, whether it requires a supporting document, whether it generates a deduction and how it is treated in the payroll and in seniority.	M
BN-48	Compute automatically the leave entitlement acquired by each employee according to the rule in force in the organisation, the seniority and any additional entitlements, all parameters being configurable and not written in the source code.	M
BN-49	Maintain for each employee and each period the acquired days, the days taken, the pending days and the remaining balance, and make this information visible to the employee.	M

Ref.	Expressed need	Priority
BN-50	Allow an employee to submit a leave request specifying the type, the dates, the number of days and the replacement, with the automatic control of the available balance.	M
BN-51	Route the request through a configurable approval circuit (line manager, then HR department) with the possibility of approval, refusal with a reason, or request for modification.	M
BN-52	Exclude weekly rest days and public holidays from the count of leave days according to a configurable rule.	M
BN-53	Prevent or signal the overlapping of leave inside the same team beyond a configurable threshold, in order to preserve the continuity of service.	S
BN-54	Manage the cancellation, the interruption and the postponement of a leave already approved.	S
BN-55	Produce the annual leave plan of the organisation and display it as a calendar per team and per department.	S
BN-56	Compute the leave allowance to be paid on departure or at the time of leave, according to the configured rule.	M
BN-57	Print the individual leave decision, the leave certificate and the summary of balances.	M
BN-58	Transfer automatically the unpaid absences and the leave allowances of the period to the payroll.	M

Table 15 – Needs of module M-06

7.7 M-07 – Timetable and Work Planning

The organisation works with different rhythms depending on the service: standard office hours, rotating shifts, and occasional weekend duty. The system must be able to describe these rhythms, plan them and publish them.

Ref.	Expressed need	Priority
BN-59	Define work schedule models: fixed hours, flexible hours, rotating shifts, part time, with the daily and weekly theoretical duration and the break times.	M
BN-60	Assign a schedule model to an employee, a position, a team or a site, with an effective date, and manage exceptions.	M
BN-61	Manage the calendar of working days, weekly rest days and public holidays, per site.	M
BN-62	Build a timetable over a chosen period by assigning employees to shifts or duty periods, and display it in a weekly or monthly grid.	M
BN-63	Control automatically the conflicts of the timetable: employee on leave, employee already assigned, minimum rest between two shifts not respected, weekly maximum exceeded.	M

Ref.	Expressed need	Priority
BN-64	Publish the timetable, notify the employees concerned and print it per team, per employee and per period.	M
BN-65	Manage the exchange or the replacement of a shift between two employees, subject to the approval of the manager.	S
BN-66	Duplicate a timetable from one period to another in order to avoid rebuilding a recurring planning.	S
BN-67	Compare the planned timetable with the attendance actually recorded and highlight the differences.	S

Table 16 – Needs of module M-07

7.8 M-08 – Career Management: Promotion, Transfer and Discipline

Every administrative decision concerning an employee must leave a trace, be based on the structure of the organisation, take effect on a given date and, when it changes the remuneration, be reflected automatically in the payroll of the corresponding period.

Ref.	Expressed need	Priority
BN-68	Record a promotion by specifying the new grade, category, echelon or position, the effective date, the reason and the decision reference, with the automatic effect on the base salary.	M
BN-69	Record a transfer or affectation by specifying the origin and destination department, site or position, the effective date and the reason, with the automatic effect on the organisation chart and on the cost centre used by accounting.	M
BN-70	Manage temporary assignments, acting positions and secondments, with an automatic return to the original situation at the end of the period.	S
BN-71	Manage salary revisions independently of promotions (individual increase, general increase, revision of a bonus), with an effective date and a justification.	M
BN-72	Record disciplinary measures (warning, reprimand, suspension, dismissal) with the date, the reason, the supporting documents and the effect on the payroll where applicable.	S
BN-73	Manage the departure of the employee whatever the reason (resignation, dismissal, end of contract, retirement, death) and trigger the final settlement of accounts.	M
BN-74	Display the complete career history of an employee as a chronological timeline: hiring, amendments, promotions, transfers, sanctions, trainings, departure.	M
BN-75	Print the decision document corresponding to each act (promotion decision, transfer decision, disciplinary letter, work certificate) from a configurable template.	M
BN-76	Require an approval circuit before an act taking effect on the payroll becomes definitive.	S

Table 17 – Needs of module M-08

7.9 M-09 – Training and Skills

Ref.	Expressed need	Priority
BN-77	Maintain a repository of skills and a skills profile per position and per employee.	C
BN-78	Collect training needs and build the annual training plan with its budget.	C
BN-79	Manage training sessions: organiser, dates, place, participants, cost and attendance.	C
BN-80	Record the result of a training, the certificate obtained and its validity, and attach it to the employee record.	C
BN-81	Evaluate the effect of the training and follow the training cost per employee and per department.	C

Table 18 – Needs of module M-09

7.10 M-10 – Performance Evaluation

Ref.	Expressed need	Priority
BN-82	Define evaluation campaigns with their period, their population and their evaluation form.	S
BN-83	Set individual objectives, follow their achievement and record the self-evaluation of the employee and the evaluation of the manager.	S
BN-84	Record the final evaluation, the score obtained, the comments and the actions decided.	S
BN-85	Link the result of the evaluation to a proposal of promotion, of training or of performance bonus transmitted to the payroll.	S
BN-86	Print the individual evaluation record and produce the summary of a campaign.	S

Table 19 – Needs of module M-10

7.11 M-11 – Payroll Management

Payroll is the most sensitive function of the system: it engages the organisation legally and financially, and any error is immediately visible to the employee and to the administration. I express here a fundamental requirement that governs the whole module: no rate, no ceiling, no scale and no threshold may be written in the source code. All these elements are parameters, dated and versioned, that the payroll officer can consult and that an authorised user can modify without any new development. When the legislation changes, the system must follow by configuration.

A second requirement is just as important: the recalculation of a past period must give exactly the same result as the original calculation, using the parameters that were in force at that date. The payroll must be reproducible and auditable.

7.11.1 Salary elements and parameters

Ref.	Expressed need	Priority
BN-87	Manage a configurable catalogue of salary elements: base salary, seniority bonus, responsibility bonus, performance bonus, transport allowance, housing allowance, representation allowance, benefits in kind, expense reimbursements and any element added later.	M
BN-88	Define for each element whether it is a gain or a deduction, its calculation method (fixed amount, rate, formula, quantity multiplied by a unit value), whether it is subject to social contributions, whether it is taxable, whether it enters the leave allowance base, whether it appears on the payslip and in which order.	M
BN-89	Manage the parameters of social contributions and of taxes withheld at source (rates, bases, ceilings, floors, scales, employee and employer shares) as dated versions, so that a change applies only from its effective date.	M
BN-90	Manage the salary grid by category, grade and echelon, and the legal minimum wage, and control that no calculated salary falls below the applicable minimum.	M
BN-91	Define the values of the elements at three levels: general default value, value per category or department, and individual value overriding the previous ones.	M
BN-92	Keep the complete history of the modification of every payroll parameter with the author, the date and the previous value.	M

Table 20 – Salary elements and payroll parameters

7.11.2 Calculation of the payroll

Ref.	Expressed need	Priority
BN-93	Manage the payroll period as a cycle with explicit states: opened, in preparation, calculated, verified, validated, paid, posted and closed, each transition being traced and reversible only before validation.	M
BN-94	Capture the variable elements of the period (overtime, bonuses, deductions, advances, absences) either manually, or by automatic retrieval from the attendance, leave and career modules.	M
BN-95	Calculate for each employee the gross salary, the base of each contribution, the employee contributions, the employer contributions, the tax withheld at source and the related levies, the other deductions and the net amount payable.	M
BN-96	Apply automatically the pro-rata of the period for an employee hired, departing, suspended or absent without pay during the month.	M
BN-97	Calculate overtime according to the categories transmitted by the attendance module and the rates defined in the parameters.	M
BN-98	Manage salary advances and loans granted to employees, with their repayment schedule and the automatic deduction of the instalment of the period, and stop the deduction when the loan is repaid.	M
BN-99	Manage the deductions ordered by a third party (garnishment, alimony, union dues) with their ceiling and their beneficiary.	S
BN-100	Manage retroactive adjustments (back pay) resulting from a promotion or a salary revision with an effective date in a past period.	M

Ref.	Expressed need	Priority
BN-101	Calculate the periodic bonuses (thirteenth month, seniority bonus, leave allowance) according to configurable rules and their own periodicity.	S
BN-102	Value benefits in kind (housing, vehicle, water, electricity, domestic staff) according to the configured rules and integrate them into the taxable and contributory bases.	S
BN-103	Calculate the final settlement of accounts on departure: outstanding salary, leave allowance, notice, seniority allowance and any indemnity due.	M
BN-104	Allow the calculation of the payroll for the whole organisation, for a department or for a single employee.	M
BN-105	Offer a simulation mode that calculates a payslip without any effect on the accounts, in order to answer a question of an employee or to prepare a hiring proposal.	S
BN-106	Refuse to validate a period as long as blocking anomalies remain: negative net amount, salary below the minimum, missing bank details, employee without contract, base equal to zero.	M
BN-107	Produce a comparison between the current period and the previous one, per employee and per element, highlighting every significant variation before validation.	S
BN-108	Lock the period after validation: no modification is possible, only a reversal followed by a new calculation, and every such operation is traced.	M
BN-109	Keep the complete payroll history of every employee and allow the consultation and the reprinting of any past period.	M
BN-110	Manage the payment of salaries by bank transfer, cheque or cash, and produce the payment order and the transfer file per bank.	M
BN-111	Calculate and follow the amounts to be paid to the social insurance body and to the tax administration for the period, with their due dates.	M
BN-112	Compute the provision for leave not yet taken and for other employee benefits at the end of each period.	S

Table 21 – Needs of the payroll calculation

7.12 M-12 – Payroll and HR Documents: Production and Printing

The capacity to print is not an accessory of this project: it is one of its main reasons. Today the HR department loses a considerable amount of time re-typing documents that the system should produce automatically. Every document listed below must be produced from a template configurable by the organisation, must carry the logo and the legal identification of the organisation, must be exportable in PDF and printable individually or in batch.

Ref.	Expressed need	Priority
BN-113	Produce and print the individual payslip of an employee for a given period, containing all the legally required mentions: identification of the employer and of	M

Ref.	Expressed need	Priority
	the employee, position and classification, period, working time, detail of the elements of the gross salary, bases and rates of each deduction, employee and employer contributions, net amount payable, method and date of payment, and leave balance.	
BN-114	Print the payslips in batch for the whole organisation, for a department or for a selection of employees, in one single operation and in one single file where required.	M
BN-115	Reprint the payslip of any past period, identical to the original, with a mention identifying a duplicate.	M
BN-116	Send the payslip by e-mail to the employee, or make it available in the self-service portal, in a protected format.	S
BN-117	Produce and print the payroll book and the payroll summary of the period, with the totals per department and for the organisation.	M
BN-118	Produce and print the recapitulative statement of contributions and of taxes withheld for the period, per body and per due date.	M
BN-119	Produce the statutory declarations of personnel and of social contributions in the form and the periodicity required by the social insurance body, and export them in the expected format.	M
BN-120	Produce the annual individual salary statement of each employee and the annual summary for the tax administration.	M
BN-121	Produce the payment order and the bank transfer file of the period, grouped per bank, with the total to be debited.	M
BN-122	Produce and print the individual pay slip register, the list of employees paid in cash and the receipt to be signed by them.	S
BN-123	Produce and print the administrative certificates: work certificate, employment attestation, salary attestation, attestation of presence, leave certificate, end-of-contract certificate and final settlement of accounts.	M
BN-124	Produce and print the contract, the amendment, the promotion decision, the transfer decision and the disciplinary letter from configurable templates fed by the data of the record.	M
BN-125	Allow the organisation to modify the templates of the documents (header, logo, mentions, signature blocks, footer) without any new development.	S
BN-126	Export every list and every report of the system in a spreadsheet format and in PDF.	M
BN-127	Keep in the system a copy of every document issued, with its date, its author and its recipient, and allow it to be found again.	S

Table 22 – Needs of module M-12

7.13 M-13 – Accounting Holding According to the OHADA System

The payroll of the organisation must be posted in accordance with the accounting system of OHADA, which applies to us. Today this posting is done by re-keying the totals of the payroll into the

accounting software, which produces discrepancies and makes the audit of the payroll accounts painful. I ask that the system produce the accounting entries itself, in the OHADA chart of accounts, and that these entries be balanced by construction and traceable down to the employee who generated them.

The needs below concern the accounting of personnel expenses and of the related liabilities. The system is not asked to replace the general accounting software of the organisation, but to hold correctly the payroll accounts and to deliver to accounting a ready-to-use, standard and auditable entry.

Ref.	Expressed need	Priority
BN-128	Hold a configurable chart of accounts complying with the structure of the OHADA accounting system, organised in classes and allowing accounts and sub-accounts of a configurable length.	M
BN-129	Allow the mapping of every payroll element to its expense account and to its counterpart account, and of every contribution and tax to the account of the corresponding third party, this mapping being configurable and versioned.	M
BN-130	Use by default the accounts of the OHADA system usually concerned by payroll — personnel expenses and social charges of class 6, the personnel and social bodies and State accounts of class 4, and the treasury accounts of class 5 — while allowing the accountant to adapt each account to the chart of accounts actually used by the organisation.	M
BN-131	Generate automatically, at the validation of a payroll period, the accounting entry of the period: debit of the personnel expense accounts and of the employer social charges, credit of the personnel remuneration due account, of the social bodies accounts, of the State accounts for taxes withheld at source and of the accounts of the other creditors.	M
BN-132	Guarantee that no entry can be generated or saved if the total of the debits is not strictly equal to the total of the credits.	M
BN-133	Allow the entry to be generated either in a consolidated form for the whole organisation, or broken down by department, site, cost centre or analytical section.	M
BN-134	Generate the entry for the payment of the salaries, debiting the personnel remuneration due account and crediting the bank or cash account, on the actual date of payment.	M
BN-135	Generate the entry for the settlement of the social contributions and of the taxes withheld, debiting the accounts of the bodies concerned and crediting the treasury account.	M
BN-136	Generate the entries of the provisions for paid leave and for other employee benefits, and the reversal of these provisions when they are used.	S
BN-137	Manage the accounting periods and the financial year, forbid any entry in a closed period, and manage the opening and the closing of the financial year.	M
BN-138	Number the entries continuously and chronologically per journal, and forbid the deletion or the modification of a posted entry: any correction is made by a reversal entry, in accordance with the principle of intangibility of the accounting records.	M

Ref.	Expressed need	Priority
BN-139	Manage the accounting journals used by payroll, in particular a dedicated payroll journal and a journal for miscellaneous operations.	M
BN-140	Attach to every accounting entry the reference of the payroll period and of the documents that justify it, so that any auditor can go back from the entry to the payslips that produced it.	M
BN-141	Produce the accounting books and statements relating to personnel: journal book, general ledger of the accounts concerned, trial balance of these accounts and detail of the balances per employee and per body.	M
BN-142	Provide the reconciliation between the payroll of the period and the accounting entry generated, and highlight any difference.	M
BN-143	Export the accounting entries in a standard format usable by the accounting software of the organisation, and allow the import of the chart of accounts from that software.	M
BN-144	Provide the analysis of personnel expenses per account, per department, per cost centre and per period, and their comparison with the budget where a budget exists.	S
BN-145	Deliver the personnel-related elements needed for the preparation of the annual financial statements of the OHADA system, in particular the amounts of personnel expenses, of the liabilities towards personnel and of the liabilities towards social bodies and the State, together with the information required for the notes.	S
BN-146	Keep all amounts in the currency of the country of establishment, manage rounding according to a single configured rule, and forbid any difference of rounding between the payroll and the accounting entry.	M
BN-147	Trace every accounting operation with its author, its date and its origin, and retain the accounting records for the legal retention period.	M

Table 23 – Needs of module M-13

7.14 M-14 – Employee and Manager Self-Service Portal

Ref.	Expressed need	Priority
BN-148	Allow every employee to authenticate and consult his or her own record, and to request the correction of an erroneous personal item.	S
BN-149	Allow the employee to consult the leave balance, to submit a leave request and to follow its progress.	M
BN-150	Allow the employee to consult and download his or her payslips and attestations.	S
BN-151	Allow the employee to consult his or her attendance record, timetable and planned shifts.	S
BN-152	Allow the employee to request an administrative document (attestation, certificate) and to be notified when it is available.	C
BN-153	Allow the manager to approve or refuse the requests of the team, to consult the attendance and the leave calendar of the team, and to propose promotions, without ever seeing the salaries.	M

Ref.	Expressed need	Priority
BN-154	Guarantee that an employee can never access the data of another employee.	M

Table 24 – Needs of module M-14

7.15 M-15 – Reporting, Dashboards and HR Indicators

Ref.	Expressed need	Priority
BN-155	Provide a dashboard adapted to each profile, showing the essential indicators as figures and as charts.	M
BN-156	Provide the headcount indicators: total headcount, distribution per department, per position, per category, per contract type, per sex, per age bracket and per seniority.	M
BN-157	Provide the movement indicators: hiring, departures, turnover rate, promotions and transfers over a period.	M
BN-158	Provide the time indicators: absenteeism rate, lateness, overtime, leave taken and leave remaining.	M
BN-159	Provide the payroll indicators: total payroll cost, evolution over the periods, distribution per department, average cost per employee, weight of contributions and of employer charges.	M
BN-160	Allow every report to be filtered by period, department, site, category and contract type, and to be exported and printed.	M
BN-161	Allow an authorised user to build a personalised report by choosing the fields, the filters and the grouping, and to save it for later reuse.	C
BN-162	Schedule the automatic sending of a periodic report to a list of recipients.	C

Table 25 – Needs of module M-15

7.16 M-16 – Notifications and Workflow

Ref.	Expressed need	Priority
BN-163	Notify the actors concerned at every step of a request: submission, approval, refusal, request for modification.	M
BN-164	Alert the HR department of the deadlines: end of trial period, end of fixed-term contract, expiry of a document, retirement age, work anniversary.	M
BN-165	Alert the payroll officer of the due dates of the payroll cycle and of the declarations.	M
BN-166	Allow the definition of the approval circuits per type of request, with several levels and a substitute in case of absence of the approver.	S
BN-167	Manage a notification centre inside the application and, in addition, the sending of e-mails, and allow every user to choose the channels.	S
BN-168	Escalate a request that remains unanswered beyond a configurable delay.	C

Table 26 – Needs of module M-16

7.17 M-17 – Security, Roles and Audit

The system will contain the most confidential data of the organisation. Security is not negotiable and is expressed here as a business need, not as a technical option.

Ref.	Expressed need	Priority
BN-169	Authenticate every user individually; no shared account is acceptable.	M
BN-170	Manage roles and profiles with fine-grained permissions per module and per action (consult, create, modify, validate, print, export).	M
BN-171	Restrict the visibility of the data per perimeter: own data, team, department, site or whole organisation.	M
BN-172	Protect salary information so that only the payroll and HR profiles explicitly authorised can consult it.	M
BN-173	Record in an unalterable audit trail every creation, modification, deletion, validation, printing and export of sensitive data, with the author, the date, the machine and the previous value.	M
BN-174	Impose a password policy, the change of the password at first connection and the automatic closing of an inactive session.	M
BN-175	Allow an authorised user to consult and export the audit trail, and forbid anyone from modifying or deleting it.	M
BN-176	Add a second authentication factor for the profiles having access to payroll.	C
BN-177	Comply with the applicable rules on the protection of personal data: purpose, minimisation, retention period, right of the employee to consult and rectify his or her data.	M

Table 27 – Needs of module M-17

7.18 M-18 – Parameters, Import, Export and Integration

Ref.	Expressed need	Priority
BN-178	Configure without development the reference data of the system: departments, positions, grades, categories, leave types, salary elements, document templates, approval circuits and accounting mapping.	M
BN-179	Import the initial data from the existing spreadsheets: employees, contracts, leave balances, salary elements and opening balances, with a control report of the rejected lines.	M
BN-180	Import the attendance data produced by a badge or biometric device in a documented file format.	S
BN-181	Export the accounting entries towards the accounting software and the payment orders towards the bank in the formats expected by these third parties.	M
BN-182	Manage the languages of the interface and of the printed documents, English and French at least.	S

Ref.	Expressed need	Priority
BN-183	Allow the automatic and regular backup of the data, and the restoration of a backup after a control.	M

Table 28 – Needs of module M-18

8. NON-FUNCTIONAL NEEDS

The following expectations do not describe functions but qualities without which the functions would not be usable in our working conditions. They apply to the whole product and must be verified at every increment.

Ref.	Expressed need	Priority
NF-01	The response time of a current operation (search, consultation of a record, display of a list) must remain under three seconds for the expected volume of data.	M
NF-02	The calculation of the payroll of the whole organisation must be completed within a few minutes, and the batch printing of the payslips must not require the workstation to remain blocked.	M
NF-03	The system must support the expected number of employees of the organisation and its growth over at least five years, as well as several dozens of simultaneous users.	M
NF-04	The system must be available during the whole working day, and any maintenance operation must be planned outside the working hours and announced.	M
NF-05	The data must be saved automatically every day, and it must be possible to restore the system after an incident with a loss of at most one working day.	M
NF-06	The interface must be simple enough for an HR officer to be autonomous after a short training, with clear error messages in the language of the user.	M
NF-07	Every amount must be displayed and printed with the same rounding rule and the same currency format throughout the system.	M
NF-08	The system must be accessible from the workstations of the organisation and, for the self-service portal, from a mobile device.	S
NF-09	The confidential data must be protected in transit and in storage, and the access to the servers must be restricted.	M
NF-10	The system must be maintainable: a change of a legal rate, of a scale or of a document template must be made by configuration, not by development.	M
NF-11	The system must be documented: user guide per profile, administration guide and description of the calculation rules applied.	M
NF-12	The historical data must be kept for the legal retention period and remain consultable and printable after the closing of a financial year.	M

Table 29 – Non-functional needs

9. BUSINESS RULES AND GOVERNING PRINCIPLES

The following principles apply to the whole product. They are not negotiable and any solution that contradicts one of them will be refused at the sprint review.

- Parameterisation before development: every legal rate, ceiling, scale, threshold and formula is a dated parameter, never a value written in the code.
- Traceability of the acts: every act concerning an employee has an author, a date, an effective date and a justification, and is never erased.
- Reproducibility of the payroll: recalculating a past period with the parameters of that period must produce exactly the original result.
- Intangibility of the validated data: a validated payroll period and a posted accounting entry are never modified; they are corrected by reversal.
- Single source of information: an item of data is captured once and reused everywhere; no double entry between HR, payroll and accounting.
- Least privilege: a user sees only what his or her role requires, and every access to salary data is logged.
- Legal conformity: the system follows the labour, social and tax rules in force and the accounting system of OHADA.
- Printability: every piece of information that the business must justify to an employee, an auditor or an administration must be printable.

10. CONSTRAINTS AND ASSUMPTIONS

Nature	Statement
Legal constraint	The system must comply with the labour and social legislation of the country of establishment and with the OHADA accounting system.
Organisational constraint	The HR and payroll staff remain available for the sprint reviews and validate the increments within the agreed delay.
Data constraint	The existing data must be recovered and cleaned before the entry into service; the quality of the historical data is the responsibility of the HR department.
Planning constraint	The system must be usable for a complete payroll cycle before the beginning of the next financial year.
Technical constraint	The solution must run on the existing infrastructure of the organisation and must not require the acquisition of specialised hardware, except an optional attendance device.
Academic constraint	The project is carried out within the framework of an academic exercise, with the resources and the calendar of the training programme.
Assumption	The organisation chart, the salary grid and the internal rules are stable and available at the beginning of the project.
Assumption	The bank and the social insurance body accept the exchange formats produced by the system.

Table 30 – Constraints and assumptions

11. EXPECTED DELIVERABLES

Ref.	Deliverable	Expected at
DL-01	Product backlog completed from this expression of need	End of sprint 0
DL-02	Functional increment demonstrated at the end of each sprint	Every sprint review
DL-03	Complete application covering the needs marked M	End of the last sprint
DL-04	Configurable document templates and printed samples	Sprint of module M-12
DL-05	Accounting mapping and export tested with the accountant	Sprint of module M-13
DL-06	Data recovery report of the existing information	Before the entry into service
DL-07	User guide per profile and administration guide	Before the entry into service
DL-08	Training of the users and support during the first payroll cycle	Entry into service

Table 31 – Deliverables expected by the Product Owner

12. SUMMARY OF PRIORITIES

The priorities below express the order in which I wish the value to be delivered. The first release must allow the organisation to run a complete payroll cycle; the rest follows.

Module	Title	Priority	Target release
M-01	Organisation and structure	Must	R1 – Core
M-02	Employee records	Must	R1 – Core
M-04	Contract management	Must	R1 – Core
M-17	Security, roles and audit	Must	R1 – Core
M-06	Leave and absence	Must	R2 – Time and absence
M-05	Attendance and time tracking	Must	R2 – Time and absence
M-07	Timetable and work planning	Must	R2 – Time and absence
M-11	Payroll	Must	R3 – Payroll
M-12	Payroll and HR documents	Must	R3 – Payroll
M-13	Accounting according to OHADA	Must	R3 – Payroll
M-08	Career management	Must	R4 – Career and steering
M-15	Reporting and dashboards	Must	R4 – Career and steering

Module	Title	Priority	Target release
M-16	Notifications and workflow	Should	R4 – Career and steering
M-18	Parameters, import, export	Must	Continuous
M-14	Self-service portal	Should	R5 – Extension
M-10	Performance evaluation	Should	R5 – Extension
M-03	Recruitment and onboarding	Should	R5 – Extension
M-09	Training and skills	Could	R5 – Extension

Table 32 – Priorities and desired releases

13. ACCEPTANCE CRITERIA OF THE PRODUCT

I will consider the product acceptable when all the following statements are verified in front of the stakeholders on real data.

- A complete employee record can be created, modified, searched, printed and archived, and its history is visible.
- An employee submits a leave request from the portal, the manager approves it, and the balance of the employee is updated automatically and correctly.
- The attendance of a month is captured or imported, and the overtime and unpaid absences are transferred to the payroll without manual re-typing.
- A timetable is built for a team, published, printed and compared with the attendance actually recorded.
- A promotion and a transfer are recorded with an effective date, the decision is printed, and the payroll of the following period reflects them automatically.
- The payroll of a complete month is calculated for the whole organisation, verified through the comparison with the previous month, corrected and validated.
- The payslips of the month are printed in batch and individually, are legally complete, and a past period can be reprinted identically.
- The payroll book, the statement of contributions and the statutory declarations of the period are produced and accepted by the persons who file them.
- The accounting entry of the payroll is generated in the OHADA chart of accounts, is balanced, is broken down per department, and is exported and integrated by the accountant without any manual correction.
- The dashboards display the headcount, the absenteeism and the payroll indicators consistent with the detailed data.
- A user of each profile connects and sees only what his or her role allows, and every sensitive operation appears in the audit trail.
- A change of a contribution rate is applied by configuration and takes effect only from its effective date, past periods remaining unchanged.

14. RISKS IDENTIFIED BY THE PRODUCT OWNER

Ref.	Risk	Severity	Mitigation expected
RQ-01	Incorrect or incomplete payroll parameters at the entry into service.	High	Parallel run of one month with the current payroll and reconciliation of the differences.
RQ-02	Poor quality of the existing data to be recovered.	High	Cleaning campaign before the import and a rejection report to be processed.
RQ-03	Change of the legal rates during the project.	Medium	Parameters dated and versioned from the first sprint.
RQ-04	Accounting mapping refused by the accountant.	Medium	Validation of the mapping with the accountant before the development of module M-13.
RQ-05	Resistance of the users to the abandonment of the spreadsheets.	Medium	Early demonstrations, training and support during the first cycle.
RQ-06	Leakage of salary information.	High	Fine-grained permissions, audit trail and restriction of exports.
RQ-07	Under-estimation of the payroll and accounting modules.	High	Early technical spike and progressive delivery of these modules.

Table 33 – Risks identified

15. OPEN POINTS TO BE CLARIFIED

Ref.	Open point	To be settled by
OP-01	Exact list of the bonuses and allowances specific to the organisation and their calculation rule.	HR Department
OP-02	Choice between a consolidated accounting entry and an entry broken down per department.	Accounting Department
OP-03	Exchange format expected by the bank for the transfer file.	Accounting Department / Bank
OP-04	Acquisition or not of a badge or biometric attendance device.	General Management
OP-05	Retention period applied to the archived records.	General Management
OP-06	Opening of the self-service portal to all employees or only to the head office.	General Management

Table 34 – Points remaining open at the issue of this document

16. STATEMENT OF THE PRODUCT OWNER

This document expresses the needs of the business as I understand them at the date of issue. It is a living document: in the spirit of the agile approach, it will evolve during the project, and every modification will be recorded in the revision history and reflected in the product backlog. Any need not written here must be submitted to me before being developed; any development not attached to a need of this document will be considered as out of scope.

I undertake to remain available for the ceremonies of the project, to answer the questions of the team within the agreed delay, to clarify the acceptance criteria of each item and to arbitrate the priorities according to the business objectives stated in section 3.
