HRMS PROJECT — SCRUM TEAM

OUR SPRINT PLAN

*What each of us builds, sprint by sprint**From the Scrum Master to the team*

Field	Value
Project	Human Resources Management System (HRMS)
From	Scrum Master — Donfack Ateufack Robine Ninnone
For	The development team
Based on	The Expression of Need written by the Product Owner
Date	10 / 09 / 2026

1. What this document is

The Product Owner has told us what the HR system must do. My job as Scrum Master is to turn that into a clear plan of work. This document does exactly that.

It tells you three simple things: **who does what**, **how we work together**, and **what we build in each sprint**. The sprint plan (section 5) is the important part — that is what we will follow every day.

2. Who does what

We have three roles on this project.

- **Product Owner — Kowo Manfouo Elie Makoda:** decides what to build and checks our work.
- **Scrum Master — Donfack Ateufack Robine Ninnone:** runs the meetings and removes your blockers.
- **Development Team — Dihou Stephanie, Noumsi Simo Abraham, Tsobeng Ifoue Marc Joel, Abbe Marwan Michel:** build the system.

How the team shares the work among yourselves is your own decision — I will not impose it. For each sprint I simply name a lead, as a single point of contact; you are free to change who that is.

3. How we work

- **Sprints last 2 weeks.** At the start we agree what to build; at the end we show it.
- **Every morning: a 15-minute stand-up.** You say what you did, what you will do, and what is blocking you.
- **End of each sprint: a demo, then a short review.** We show the working software to the Product Owner and talk about what to improve.
- **One shared board.** Every task moves: To do → In progress → In test → Done. If a task is blocked, tell me straight away.
- **If it is not on the plan, do not build it.** Found something missing? Tell me, and I will talk to the Product Owner.

4. The plan at a glance

We deliver in five steps (releases). The one that matters most is **Release 3**: once it is done, the organisation can run a full payroll. That is our main goal — the rest comes after.

Release	What it gives us	Sprints
1	Company structure, employee files, contracts, logins	Sprint 1 to 3
2	Attendance, leave, work schedules	Sprint 4 to 6
3	Payroll, payslips, accounting (main goal)	Sprint 7 to 10
4	Careers, reports and dashboards	Sprint 11 to 12
5	Self-service, evaluation, recruitment, training	Sprint 13 to 15

Before all of this comes **Sprint 0**: we set up the tools and prepare the work.

5. The sprint-by-sprint plan

This is what we build in each sprint. The goal is fixed; you decide together in planning how to split the work into tasks.

Sprint 0 — Get ready and analyse the project

Goal: The tools are ready, the whole project is analysed, and the work is prepared.

- Analyse the entire project and produce all the UML diagrams, under the supervision of **the scrum master and Abraham for the internal organisation**.
- Set up the code repository, the shared board and the test environment.
- Prepare the list of work (the backlog) from the Product Owner's document.
- Agree how we estimate and what "finished" means for us.
- The team starts studying the two hardest parts: **payroll calculation** and **OHADA accounting**.

Who leads: Whole team; the project analysis and UML diagrams are supervised by Nourmsi Simo Abraham.

Sprint 1 — Company structure + logins

Goal: The company structure exists and people can log in with the right permissions.

- Company, sites, departments, positions, grades (module M-01).
- Individual logins, roles and permissions, activity log (module M-17).

Who leads: Dihou (structure), Abbe (logins/security).

Sprint 2 — Employee files

Goal: A complete employee file exists — the heart of the system.

- Create, view, edit and archive an employee file: identity, contacts, family, job details, bank details (module M-02).
- Search employees and export the list.
- Make sure salaries stay hidden from people who should not see them.

Who leads: Dihou (files), Abbe (permissions).

Sprint 3 — Contracts — end of Release 1

Goal: Contracts are managed and Release 1 works end to end.

- Contract types, contract details, changes to a contract, end of contract (module M-04).
- Tidy up and demo Release 1: an employee file can be created, searched, printed and archived.

Who leads: Dihou (contracts), whole team on finishing.

Sprint 4 — Attendance

Goal: Presence, lateness, overtime and absences are recorded correctly.

- Record entries and exits; work out hours, lateness and overtime automatically (module M-05).
- Turn unjustified absences into a deduction; produce attendance sheets.

Who leads: Nourmsi.

Sprint 5 — Leave

Goal: Every employee's leave balance is always correct and visible.

- Leave types and rules; automatic leave balances (module M-06).
- An employee asks for leave online; the manager approves; the balance updates by itself.

Who leads: Nourmsi (leave), Abbe (approval alerts).

Sprint 6 — Work schedules — end of Release 2

Goal: Work schedules are planned, published, and alerts work.

- Build and publish work schedules; check for clashes automatically (module M-07).
- Send alerts at each step of a request (module M-16).
- Demo Release 2: attendance, leave and schedules all working.

Who leads: Noumsi (schedules), Abbe (alerts).

Sprint 7 — Payroll — the engine

Goal: The system calculates a correct salary for a normal employee.

- Salary items and all rates/settings kept as changeable settings, never fixed in the code (module M-11).
- Calculate gross salary, contributions, tax and net pay.

Who leads: Tsobeng leads; whole team helps — this is the big one.

Sprint 8 — Payroll — the hard cases

Goal: Overtime, advances, back-pay and final settlements all work.

- Overtime pay, salary advances and loans, back-pay, final pay when someone leaves (module M-11).
- Block a payroll that has errors; prepare a test run against the old payroll.

Who leads: Tsobeng leads; whole team.

Sprint 9 — Payslips & documents

Goal: All payslips and documents print correctly, one by one or in bulk.

- Payslip with all legal information; print in bulk; reprint an old payslip (module M-12).
- Payroll book, contribution statements, declarations, certificates, bank payment file.

Who leads: Abbe (documents), Tsobeng (payroll data).

Sprint 10 — Accounting (OHADA) — end of Release 3, main goal

Goal: The payroll turns into balanced accounting entries automatically, with no re-typing.

- Generate the OHADA accounting entries when a payroll is validated (module M-13).
- Check them with the accountant and export them to the accounting software.
- Demo the full cycle: **calculate → check → validate → print payslips → declarations → accounting entry.**

Who leads: Tsobeng (accounting), Abbe (export), whole team.

Sprint 11 — Careers

Goal: Promotions, transfers and departures are recorded and reach payroll on their own.

- Record a promotion or a transfer with a date; it changes the salary and the structure automatically (module M-08).
- Show an employee's full career history; print the decision documents.

Who leads: Dihou.

Sprint 12 — Reports & dashboards — end of Release 4

Goal: Management sees reliable figures without extra work.

- Dashboards: headcount, movements, absences, payroll cost (module M-15).
- Finish the deadline alerts (end of contract, retirement, due dates) (module M-16).

Who leads: Abbe (reports), Dihou (career figures).

Sprint 13 — Self-service portal

Goal: Employees and managers do things themselves, safely.

- An employee views their file, leave balance, payslips and schedule, and asks for leave (module M-14).
- A manager approves the team's requests without ever seeing salaries.

Who leads: Noumsi (portal), Abbe (security).

Sprint 14 — Evaluation & recruitment

Goal: Performance reviews and hiring feed the same files, no re-typing.

- Evaluation campaigns, objectives, results, printed reviews (module M-10).
- Job offers, applications, and turning a hire into an employee file (module M-03).

Who leads: Dihou (evaluation), Noumsi (recruitment).

Sprint 15 — Training + go-live

Goal: The last features are done and the system is ready for real use.

- Skills and training: plan, sessions, results, costs (module M-09).
- Move the old data in, write the user guides, and train the users for the first real payroll.

Who leads: Whole team.

6. A few rules we never break

The Product Owner insists on these. Any work that breaks one of them will be rejected — so build them in from the start.

- **No rates in the code.** Every rate, scale or amount is a setting we can change, with a date.
- **Keep the history.** Every action has an author and a date, and is never erased — mistakes are corrected, not deleted.
- **Enter data once.** The same information is never typed twice across HR, payroll and accounting.
- **Show only what the role allows.** Salaries are protected; every access to them is logged.
- **Everything must print.** Anything we must show an employee, an auditor or the administration must be printable.

7. What to do this week

- **Read** this plan and the Product Owner's document. Bring your questions.
- **Set up** the code repository, the board and the test environment. (Abbe + me)
- **Write your first tasks** for your area (Release 1 and 2). (each person for their area)
- **Tsobeng:** start looking into payroll and OHADA, tell us what you find.
- **Confirm the dates** with me — how many sprints we can really fit in our school calendar.

One honest note. The full plan is 16 sprints. If our time is shorter, we do not lower the quality — we do fewer things. Everything up to Sprint 10 (a working payroll) is the real target; Releases 4 and 5 come after, and I will agree any cuts with the Product Owner.

Any question or blocker, come to the stand-up or message me. My job is to clear the way so you can build.

— Donfack Ateufack Robine Ninnone, Scrum Master.
